INSERT (Transact-SQL)

08/09/2017 • 34 minutes to read •  +6**APPLIES TO:**  SQL Server  Azure SQL Database  Azure SQL Data Warehouse  Parallel Data WarehouseAdds one or more rows to a table or a view in SQL Server. For examples, see [Examples](#). [Transact-SQL Syntax Conventions](#)

Syntax

 Copy
-- Syntax for SQL Server and Azure SQL Database

```
[ WITH <common_table_expression> [ ,...n ] ]
INSERT
{
    [ TOP ( expression ) [ PERCENT ] ]
    [ INTO ]
    { <object> | rowset_function_limited
      [ WITH ( <Table_Hint_Limited> [ ...n ] ) ]
    }
    {
        [ ( column_list ) ]
        [ <OUTPUT Clause> ]
        { VALUES ( { DEFAULT | NULL | expression } [ ,...n ] ) [ ,...n ]
          | derived_table
          | execute_statement
          | <dml_table_source>
          | DEFAULT VALUES
        }
    }
}
[;]
```

Transact-SQL Syntax Conventions (Transact-SQL)

03/08/2018 • 4 minutes to read •  +8**APPLIES TO:**  SQL Server  Azure SQL Database  Azure SQL Data Warehouse  Parallel Data Warehouse

The following table lists and describes conventions that are used in the syntax diagrams in the Transact-SQL Reference.

Convention	Used for
UPPERCASE	Transact-SQL keywords.
<i>italic</i>	User-supplied parameters of Transact-SQL syntax.
bold	Type database names, table names, column names, index names, stored procedures, utilities, data type names, and text exactly as shown.
underline	Indicates the default value applied when the clause that contains the underlined value is omitted from the statement.
(vertical bar)	Separates syntax items enclosed in brackets or braces. You can use only one of the items.
[] (brackets)	Optional syntax items. Don't type the brackets.
{ } (braces)	Required syntax items. Don't type the braces.
[... <i>n</i>]	Indicates the preceding item can be repeated <i>n</i> number of times. The occurrences are separated by commas.

[Multipart Names](#)[Code Example Conventions](#)["Applies to" References](#)[See Also](#)

INSERT Syntax

```
INSERT INTO table_name (column_one, column_two, ..., column n)  
VALUES ( {default | NULL | expression} )
```

INSERT Syntax

Specify destination
table

Which columns are going to be
inserted

```
INSERT INTO table_name (column_one, column_two, ..., column n)  
VALUES ( {default | NULL | expression} )
```

Specify search condition for a
group or an aggregate.

INSERT With Columns and Values

Columns	Values
[Reputation]	1
[CreationDate]	CAST(N'2016-06-22T17:35:14.680' AS DateTime)
[DisplayName]	N'xavier-morera'
[LastAccessDate]	CAST(N'2016-06-22T17:35:14.680' AS DateTime)
[WebsiteUrl]	NULL
[Location]	N'Costa Rica'
[AboutMe]	NULL
...	..

Demo

An INSERT Statement
With Columns and Values

Optional to provide all columns with values

- Default values or NULL

Providing columns argument is optional

- Not needed if all values provided
- And in order

Demo

An INSERT Statement
With All Values

NOT NULL and NULL

Id
Reputation
CreationDate
DisplayName
LastAccessDate
Views
UpVotes
DownVotes

NOT NULL

Fields that are required
when inserting records

WebsiteUrl
Location
AboutMe
ProfileImageUrl
AccountId

NULL

If missing they are inserted
as NULL or a default value

Demo

An INSERT Statement

With Some NULL and Default Values

Identity column is inserted automatically

Possible to specify identity explicitly

- Must set `IDENTITY_INSERT` to allow this
- Else an error is raised

Demo

INSERT with Identity

Constraints are used to specify rules

- For the data in the table

For example limit type or value of the data

- Operation aborted on constraint violation

Constraints at table or column level

Typical constraints include

- NOT NULL
- UNIQUE
- PRIMARY KEY
- FOREIGN KEY
- DEFAULT

Demo

INSERT with Constraints

INSERT more than 1 record

- Large file with structured data
 - CSV

"Import" the file all at once

- Instead of one row at a time

BULK INSERT

BULK INSERT (Transact-SQL)

02/14/2019 • 21 minutes to read •  +11

APPLIES TO:  SQL Server  Azure SQL Database  Azure SQL Data Warehouse  Parallel Data Warehouse

Imports a data file into a database table or view in a user-specified format in SQL Server

 [Transact-SQL Syntax Conventions](#)

Syntax

 Copy

```
BULK INSERT
{ database_name.schema_name.table_or_view_name | schema_name.table_or_view_name | table_or_view_name
FROM 'data_file'
[ WITH
(
[ [ , ] BATCHSIZE = batch_size ]
[ [ , ] CHECK_CONSTRAINTS ]
[ [ , ] CODEPAGE = { 'ACP' | 'OEM' | 'RAW' | 'code_page' } ]
[ [ , ] DATAFILETYPE =
{ 'char' | 'native' | 'widechar' | 'widenative' } ]
[ [ , ] DATASOURCE = 'data_source_name' ]
[ [ , ] ERRORFILE = 'file_name' ]
[ [ , ] ERRORFILE_DATA_SOURCE = 'data_source_name' ]
[ [ , ] FIRSTROW = first_row ]
[ [ , ] FIRE_TRIGGERS ]
[ [ , ] FORMATFILE_DATASOURCE = 'data_source_name' ]
[ [ , ] KEEPIDENTITY ]
[ [ , ] KEEPNULLS ]
[ [ , ] KILOBYTES_PER_BATCH = kilobytes_per_batch ]
[ [ , ] LASTROW = last_row ]
[ [ , ] MAXERRORS = max_errors ]
[ [ , ] ORDER ( { column [ ASC | DESC ] } [ , ... n ] ) ]
```

Thank you.

Demo

Adding Multiple Rows with
BULK INSERT

Takeaway

SELECT is potentially the most common statement

- But to query data, you need data

Add data to your tables using INSERT

Multiple scenarios that you need to consider

Takeaway

INSERT with

- All columns and all values
- All values
- NULL and default values
- Explicitly set identity
- With constraints
- Insert multiple rows at once with BULK INSERT
